- Lexical analysis
 - Detects inputs with illegal tokens
- Parsing

 - Last “front end” phase
 - Catches all remaining errors

- Parsing cannot catch some errors
- Some language constructs not context-free

- Checks of many kinds . . . **coolc** checks:
 1. All identifiers are declared
 2. Types
 3. Inheritance relationships
 4. Classes defined only once
 5. Methods in a class defined only once
 6. Reserved identifiers are not misusedAnd others . . .
- The requirements depend on the language
